

Dynatrace Network Application Monitoring 2018 Release Candidate is available

Network application monitoring has just got better!

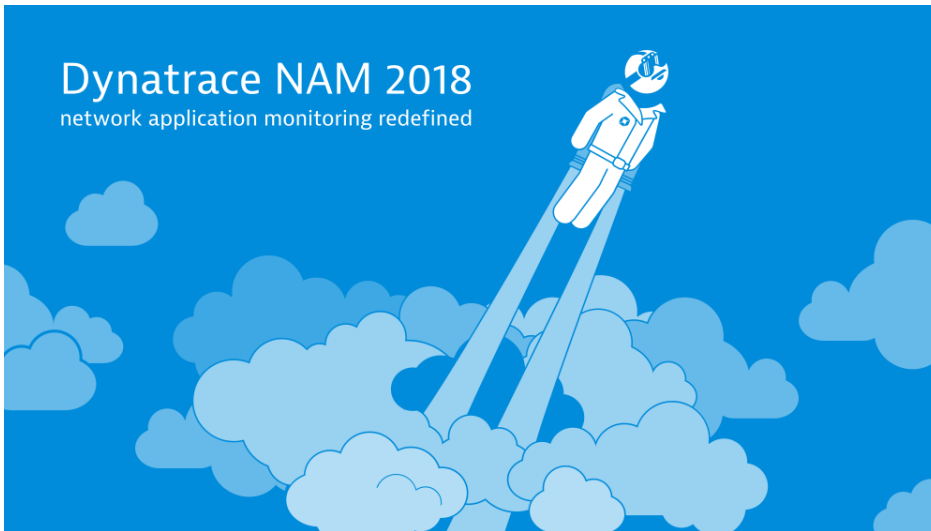

DC RUM becomes **Dynatrace Network Application Monitoring (NAM)**.

We're at an exciting turning point on the product roadmap as we shift from a solution supporting a portfolio of largely stand-alone use cases to a set of capabilities extending Dynatrace's reach within the enterprise.

[Release Notes](#)

While we've had multiple levels of product integration for some time, this shift will see wire data-sourced insights integrated more comprehensively into Dynatrace.

The upcoming 2018 release of **Network Application Monitoring (NAM)** focuses on integration with Dynatrace and product experience, including:

More integration

Support for data delivered by all types NAM analyzers, splitting data among multiple tenants, single sign on, and additional interlinking between Dynatrace Hosts dashboards and Dynatrace NAM server reports.

Enhanced reporting

Improved reporting and analytics with new DMI capabilities, such as calculated columns, advanced filtering, more fine-grained resolutions, or metric values rendered on Universal Diagram.

New alerts

Redesigned alerting powered by the DMI reporting engine to better align alerts and reports.

Improved user access

Fine-grained administrative roles and support for user name anonymization to better answer GDPR requirements.

Ease of use

Deployment simplification, a modernized Application health dashboard, updated event and data integrations as part of Dynatrace unification.
