

Data Center RUM 2017 May Service Pack 6 is available

Get the most out of DC RUM

DC RUM 2017 May Service Pack 6 is now available. This is a maintenance release covering resolved issues for all DC RUM May 2017 Service Packs up to now. All customers are encouraged to upgrade and take advantage of these improvements.

[Get 2017 May Service Pack 6](#)

What's updated

The following release versions are included in **Dynatrace Data Center RUM 2017 May Service Pack 6** release:

- RUM Console 17.0.6
- CAS 17.0.6
- ADS 17.0.6
- AMD 17.0.6

See the [Release Notes](#).

HTTP PATCH method

We added monitoring of the HTTP PATCH method for HTTP analyzer.

Port aggregation

Starting with DC RUM 2017 SP6, we have added the ability to aggregate ports per defined software service. You should aggregate the ports for software service definitions that result in reporting unusually large number of ports. This way, you can limit the unnecessary number of sessions, which improves the CAS performance and the quality of data exported to Dynatrace for integration.

See [Configuring rules for user-defined software services](#)
