

How To Select a Random Value from an Array

Information:

Environment

- Dynatrace Portal
- Dynatrace Recorder

Symptoms

Setting a script to select a random value from an array.

Solution

To configure a script to select a random value from an array:

1. Create your list.
2. Code a random function call to select one of those values.
3. Assign the function call to the desired element.

For example:

```
var myList = new Array("Honda","Toyota","Ford");  
var reqValue = myList[Math.floor(Math.random()*3)]  
document.getElementById('myCar').value = reqValue
```

You can use the above code wherever you can use JavaScript in Dynatrace Recorder script.
