

Why didn't the configured Quick Pick nodes appear under Edit Backbone Tests

Environment

- Dynatrace Classic Portal
- Synthetic Backbone

Symptoms

I selected the node quick pick group under **Multi-Edit Node Configuration**, but when I went back to **Add/Edit Backbone Tests > Nodes**, those nodes were not selected.

Solution

Once the Quick Pick nodes take effect, they will be displayed under **Add/Edit Backbone Tests**. If you don't see the nodes after you selected the Quick Pick, generally there are two reasons:

1. Under **Multi-Edit Node Configuration**, after you click **Locate** for the Quick Pick group, two further steps need to be taken. If not, the quick pick group is not selected thus not displaying under **Add/Edit Backbone Tests**.

The two further steps are:

- i. Click the right arrow to move the highlighted nodes from left to right.
- ii. Click **Submit**.

2. If the above steps are taken and still those nodes are not displayed, check whether the target nodes have the agent type the test needs.

A Backbone test can run on two agent types: FF and IE.

To check which nodes have which agents, go to **Admin > View Node Manager**.
