

# How to chart a single day from a test 3 months ago with high resolution

## Information:

Environment
<ul style="list-style-type: none"><li>• Dynatrace Classic Portal</li></ul>
Symptoms
How can I plot a single day from a test 3 months ago with high resolution like 1 hour?
Solution
<p>You can use the Trending function in the Dynatrace Classic Portal to drill down into hour-level details of response time and availability.</p> <p>In the Dynatrace Classic Portal, select <b>Performance Tests &gt; test type &gt; Trending</b>, where <i>test type</i> is the Backbone, Last Mile, or Synthetic Mobile link.</p> <p>The object level data of a test older than last 33 days is not stored in the database, so you can only use the Trending chart to get historical data. Trending chart data is test level data, not object level data, so it is not as detailed as the regular performance chart.</p>
