

Could not configure a saved chart as a report

Information:

Environment
<ul style="list-style-type: none">• Dynatrace Classic Portal

Symptoms
When I create a test performance chart for the last 1 day and click the Save Chart icon, the saved chart can be configured to be sent out as a report. If I change the time range to the last week and click the Save Chart icon, the saved chart cannot be configured to be sent out as a report. Why is the one-week report not available?

Solution
The saved chart can be set to be sent out as a report only when you select a time period of 1 day or less. If you want to send the test results for more than one day as a report, go to ADMIN > Reports > Create a new report . When you configure a report, you can choose Week-to-date, Month-to-date, Last Week, or Last Month for the time period, and send the result as a report.
