

How can I know if a Mobile agent is a mobile device or a PC

Environment
• Synthetic Mobile

Solution

You can get the machine name in the Dynatrace Classic Portal. You must have an admin-level profile to view this information.

1. Select **Admin** to display the My Settings page.
2. In the **Synthetic Monitoring** section, clickView Mobile Location to display the Mobile Locations page.
3. Click **View mobile location characteristics**.

A machine name like "GMNIADMA06" indicates a PC simulating a mobile device.
