

Last Mile and Private Last Mile country checks

Environment

- Synthetic Monitoring - Last Mile
- Synthetic Monitoring - Private Last Mile
- Synthetic Classic Portal

Question

How do Last Mile and Private Last Mile determine the country where the peer is located?

Answer

The country where a Last Mile or Private Last Mile peer is located in is determined based on the external IP of the client machines. The IP is checked using Maxmind IP resolution service.

If the machine (peer) is using a proxy or VPN, the external facing IP address of the machine will identify the country where the proxy or VPN originated, which may not be where the peer is located.
