

Can I move a test between Last Mile and Private Last Mile

Information:

Environment
<ul style="list-style-type: none">• Dynatrace Portal• Last Mile• Private Last Mile

Because of the structure of the tests, it is not possible to change a test from Last Mile to Private Last Mile or the other way around. Data gathered from Last Mile, which uses a global network of real end users, is not directly equivalent to data gathered from a Private Peer network, which is limited to computers on which your organization has installed a Private Peer agent. Combining data from both networks in the history of a single test would present potentially misleading and confusing information.

However, in the Dynatrace Portal, you can use the same script or URL(s) to create separate tests for Last Mile and Private Last Mile.

1. In the Dynatrace Portal, select **Tests** in the **Manage** section of the navigation menu . The Tests page appears.
2. Click **Create test** at the top right of the page.
3. On the Add Tests page, choose the desired combinations of test type and browser, then click **Continue**.
4. Proceed through the configuration screens to define the tests. Note that when you select different test types — in this case, Last Mile and Private Last Mile — you will see a separate configuration screen for each test type.

For detailed instructions for creating tests, see [Adding tests](#) in the Dynatrace Synthetic documentation.
