

# How to delete a Maintenance Window

## Information:

Environment
<ul style="list-style-type: none"><li>• Dynatrace Portal</li></ul>

You can have recurring maintenance windows for individual tests, for multiple tests, or for all tests in your account; you can only define one-time maintenance windows for individual tests.

Only users with the Account Primary, Account Admin, or Test Admin profile can create or manage maintenance windows.

To delete a maintenance window for a specific test, edit the test:

1. Go to the Edit a *TestType* Test page for the test. For details, see [Editing Tests](#) in the documentation.
2. Select **Advanced Settings**.
3. In the **Maintenance Windows** section, click the **Delete** icon for the maintenance window.
4. Click **Update and Finish** to save the change.

To delete a maintenance window assigned to multiple tests, including default (account-wide) maintenance windows:

1. Go to the **Maintenance windows** page: open the features menu and select **Maintenance window**.
2. If necessary, you can filter the maintenance window list to find the window you want to delete.
3. Click the **Remove** icon ( **X** ) for the maintenance window. When prompted to confirm, click **Yes**.
