

# Listen to your PurePerformance Podcast

We are happy to announce **PurePerformance**: The Podcast about "*The brutal truth about digital performance engineering and operations*"

Andreas (aka Andi) Grabner (@grabnerandi) and Brian Wilson (@emperorwilson) are veterans of the digital performance world. Combined they have seen too many applications not scaling and performing up to expectations. With more rapid deployment models made possible through continuous delivery and a mentality shift sparked by DevOps they feel it's time to share their stories. In each episode, they and their guests discuss different topics concerning performance, ranging from common performance problems for specific technology platforms to best practices in development, testing, deploying and monitoring software performance and user experience. Be prepared to learn a lot about metrics

Andi & Brian both work at Dynatrace, where they get to witness more real world customer performance issues than they can TPS report at.
