

# How to use Host Mapping in the Recorder

Environment
<ul style="list-style-type: none"><li>• Dynatrace Recorder</li></ul>

  

Symptoms
I would like to use host mapping in Compuware Recorder, to have my host name map to another host name. How can I do it?

To map a host to another host name:

1. Create or open a script in the Dynatrace Recorder.
2. In the script settings, select the **Hosts** tab.
3. Click the add icon ( + ) to display the fields for host mapping.
4. In the **Hostname** field, type the original host name.
5. Select **Hostname** from the **Map To** list.
6. In the **Destination** field, type the host name. You can map to a maximum of three hosts.

Repeat steps 3–6 for each host mapping you need in the script.

For more information about script settings, see the help page [Modifying Script Settings](#).
