

Upgrade to the Dynatrace Performance Network

Starting on Monday, April 25th, Dynatrace will begin a Backbone network upgrade that includes Browser Agent updates to support **Chrome 46** and **Firefox 38**, and the maintenance release of the **Internet Explorer 11** Browser Agent. The new Browser Agents enable you to generate and measure **more accurate and representative transactions**, and supports today's modern Web and Web 2.0 standards. One much asked for enhancement includes the support for [HTTP/2](#), which is now supported in these latest releases of Chrome and Firefox.

The schedule of the upgrade can be found on [Dynatrace Performance Network Updates](#) page. Note that during the first week, which starts April 25th, only 4 nodes will be updated and soak tested. Network-wide updates are then scheduled to occur the following week starting May 2nd and expected to be completed by May 6th.

To be automatically notified of updates, click the **Watch** button at the top of the page.

Detailed release notes for the updated Browser Agents can be found [here](#).
