

XF consumption for a step that is commented out in the script

Information:

Environment
<ul style="list-style-type: none">• Dynatrace Recorder• Dynatrace Portal
Symptoms
I have commented out all the actions in a step of my script. Will that step still be considered when measuring usage?
Solution
Yes. A commented-out step in a script will consume XF measurements just as if it were executed in the test. Best practice is to delete commented-out actions before uploading the script to the Dynatrace Portal.
