

Installing Private Last Mile on VMware

Information:

Environment

Private Last Mile

Symptoms

Customer wants multiple instances of Private Last Mile to run on one machine.

Solution

The default Private Last Mile installer does *not* include a built-in virtual machine, so you can install Private Last Mile in a VMWare environment.

Download the PLM version from the URL below:

PRIVATE LAST MILE

Monitor from where it matters most.

What is Private Last Mile?

Private Last Mile is a secure Java based application that allows companies to create specialized and controlled groups for website monitoring. These PEERs will then be utilized in the testing and validation of websites to help achieve performance excellence and to maximize their online investments.

How do I get Private Last Mile?

To become a member of the Private Last Mile network, enter your company's network name and password to the right.
