

The Range Header does not retrieve the expected bytes

Information:

Environment
<ul style="list-style-type: none">• Dynatrace Recorder• IE Agent
Symptoms
I have an IE agent script that should retrieve the first 4 MB of a single object. However, it succeeds in retrieving the full 4MB only part of the time. How can I resolve this problem?
Solution
This IE agent script uses Headers - Range to retrieve the first 4MB. In some cases, the Range Header doesn't work as expected. If it is a single object that is called by a Navigate action, you could use a GET function in an HTTP action instead, as a workaround.
