

What All Sites means for an Alert

Information:

Environment
<ul style="list-style-type: none">• Dynatrace Portal• Alerts
Symptoms
An Alert contains the phrase "All Sites" - for example: [Test Name] - Transaction Failure - Failed - All Sites In the Alerts Log, the Progression column may display "All Sites".
Solution
All Sites indicates that all nodes running the test in question were in the alert status at the time the notification was sent. For example: if the test is running on two nodes, and issues occur on both nodes, All Sites will automatically be appended to the alert notification to ensure that you are aware that all sites are affected.
