Elasticsearch Fastpack

The Dynatrace FastPack for Elasticsearch provides a plugin for Dynatrace which collects various metrics f

Cluster and sends them to a Dynatrace instance. It also provides a System Profile and a sample Dashboard showing some of the metrics.

Splunk Application Comments

Big Data Business Transaction Bridge

Perfect Source of Data

The Big Data Business Transaction Bridge makes it possible to store Business Transaction Results to Hadoop and other stores easily. The results are either written as CSV or JSON files and can be included in Hive as well. Flume is a distributed service for collecting, aggregating, and moving large amounts of log data. In this case, it can be used to receive data from the dynaTrace [Real Time Business Transactions Feed](#) via HTTP Post request to Hadoop HDFS or other stores.

SOLR Monitoring FastPack

The dynaTrace FastPack for the SOLR enables easy out-of-the-box monitoring for applications using the Solr. The FastPack consists of predefined JMX Measures for SOLR, Sensors for SOLR Server and SOLR Clients, Transactions a Template Profile and Dashboards.

Amazon SimpleDB Fastpack

The dynaTrace FastPack for Amazon SimpleDB enables easy out-of-the-box monitoring of read and write operations on Amazon SimpleDB usage via Java. The FastPack consists of a Sensor Pack, a Sample Profile and Dashboard.

Apache Hadoop and MapReduce FastPack

As of version 5.5 Dynatrace AppMon has built-in support for Hadoop MapReduce. This FastPack provides a Job Monitor for further monitoring and analysis.

Apache Cassandra Fastpack

The dynaTrace FastPack for the Apache Cassandra NoSQL Database enables easy out-of-the-box monitoring. It consists of predefined JMX Measures for Cassandra, Sensors for Cassandra Server and Cassandra Clients, a Template Profile and Dashboards.
