

# Can object level data be downloaded from the waterfall chart

Environment
Synthetic Classic Portal - Waterfall Chart Synthetic Classic FTP data feeds Synthetic Classic Web Services

In the Synthetic Classic Portal, you can download data from the waterfall chart in HAR format. At the top right corner of the waterfall chart, click **Download data** and save the file. For more information, see [Waterfall chart](#) in the documentation.

Another option for downloading object level data is through a data feed. Several different types of data feeds are available, including FTP and Web Services. For more information, see [Data feed API](#) in the documentation.
