

Retrieving header and IP information from Mobile tests

Information:

Environment
<ul style="list-style-type: none">• Synthetic Mobile

Solution
<p>To obtain header information from a Mobile test, you can download the Screen Capture on Error or Screen Capture on Success data for the test. The SCoE will contain HTML files as well as a <code>header.xml</code> file. Mobile tests also offer SCoS (Screen Capture on Success), which will also contain the same HTML and header information.</p> <p>Unfortunately, there are no permanent static IP addresses associated with the Mobile nodes; because of the configuration of the networks and ISPs being used, Mobile IPs are generated dynamically. We apologize for any inconvenience.</p>
