

Does the Private Last Mile Peer support NTLM Proxy

Information:

Environment

- Private Last Mile > Private Peer

Symptoms

I am configuring the private peer just installed. But the peer freezes after I filled in the proxy settings. I am using the NTLM proxy. Does the peer support that?

Solution

NTLM is not an officially supported proxy for the peer. Good news is there is a workaround can make the peer work with NTLM proxy.

Please follow the steps below to enable this workaround:

1. Stop private peer service first. (Exit the peer and double check through Task Manager that peer related services are stopped: gomezpeer.exe, gomezpeersvc.exe.)
2. Add "-Djdk_conn=true" parameter into javparms.dat file located at the GomezPEER directory, seen below:
`-DVERSION_FILE=http://lastmile.gomez.com/p3/kernel/version.xml -Djdk_conn=true`
3. Start private peer service again
