

A Compuware APM Mobile Client update 12.1.1 for iPhone, iPad and Android is now available

Hello APM community !

We are proud to announce that an improved and updated version of our native mobile application, integrating real user and synthetic user performance monitoring, is now available FREE for iPhone, iPad and Android devices. Your DC RUM dashboards are now accessible from the palm of your hand! The Compuware APM Mobile Client can be downloaded from the [Apple App Store](#) and [Google play](#). Whether you are in a meeting, at lunch, or in the 'war room', with a couple of taps and a few swipes you can quickly check the health of your mission critical applications in real-time, isolate the fault domain of an application problem, and hand off to the appropriate team to isolate the root cause.

This update includes:

- The new Summary View provides a high level overview of the health of your business.
- Easier navigation from anywhere in the application via the new menu
- General defect fixes and quality tuning

All customers are encouraged to upgrade as soon as possible, application is free and installation takes minutes to complete.

Development and PM team.
