

dynaTrace FastPack for Clojure

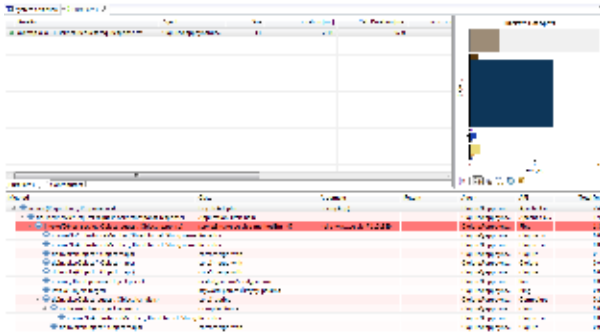

Rasmus Toelhoej, Senior Consultant at MCG Systems, created a new FastPack that provides great out-of-the-box support for applications developed with [Clojure](#):

Clojure is a dynamic programming language that targets the Java Virtual Machine (and the CLR). It is designed to be a general-purpose language, combining the approachability and interactive development of a scripting language with an efficient and robust infrastructure for multithreaded programming. Clojure is a compiled language - it compiles directly to JVM bytecode, yet remains completely dynamic. Every feature supported by Clojure is supported at runtime. Clojure provides easy access to the Java frameworks, with optional type hints and type inference, to ensure that calls to Java can avoid reflection.

The FastPack comes with a pre-configured System Profile and 3 Sensor Packs. dynaTrace customers can download it from the [FastPack Download Page: Clojure FastPack](#)
