

When specifying filters for CICS TransCode is it ok to leave the MQ.QueueNameInclude set to a wild card

Information:

Environment

- Configuration

Symptoms

I want to specify the transcodes an the app within the dT CICS sensor properties. I have to specify MQ.Enabled = true, and MQ.QueueNameInclude = *
When specifying filters for the CICS TransCode would it be ok in terms of the agent to leave the MQ.QueueNameInclude set to a wild card?

Solution

Transaction code filters are not connected to the MQ filters, so adding a wildcard is not a problem.
