

zDC log getting message 0IDC3012I ENTRY SYS3. DYTRACE.V505.DAT.CHLD.LOG NOT FOUND IDC3009I VSAM CATALOG RETURN CODE IS 8 - REASON CODE IS IGG0CLEG-42 IDC0551I.

Information:

Environment

AppMon

Symptoms

0IDC3012I ENTRY SYS3.DYTRACE.V505.DAT.CHLD.LOG NOT FOUND IDC3009I ** VSAM CATALOG RETURN CODE IS 8 - REASON CODE IS IGG0CLEG-42 IDC0551I ** ENTRY SYS3.DYTRACE.V505.DAT.CHLD.LOG NOT DELETED 0IDC0001I FUNCTION COMPLETED, HIGHEST CONDITION CODE WAS 8

Solution

The ZDC log file is only used for internal debugging at the request of support and development.

It's disabled by default: LOG_INITIAL(CLOSED).

Suggest deleting or commenting out the IDCAMS step (ZDCMEPCA) to avoid the error messages.

<Snip from the verbose ZDCPARMS sample>

```
*****  
** **  
** LOG PARAMETERS **  
** **  
** zDC contains an extensive logging facility uses normally **  
** only for debugging program errors. Compuware support **  
** personnel may ask you to enable the logging facility to **  
** help them find an error with the zDC code. **  
** **  
** If these parameters are omitted, then there is no logging **  
** active in this zDC and there is no overhead associated **  
** with the log facility. If you enable logging, the CPU **  
** usage of the zDC region may increase a little but care **  
** has been taken to insure that the log does not cause any **  
** significant performance impact to zDC itself. **
